

Onexar Gold Dynamic Leverage Terms & Conditions

1. Scope and eligibility

- a) These Terms apply only to the specially approved ONEXAR MT5 Gold Dynamic Leverage arrangement for Gold (XAUUSD), and not automatically to other instruments, account types or existing accounts.
- b) Access is subject to a client request, ONEXAR approval, any applicable client eligibility restrictions and acceptance of these Terms. ONEXAR may decline a request where permitted by applicable law and account agreements.
- c) Existing accounts and their previously approved leverage conditions remain unchanged unless a separate change is expressly approved and communicated.

2. Weekday progressive Gold leverage bands :

Cumulative Gold exposure	Leverage
First 3.00 lots (0.01-2.99 before boundary)	1:500
Next 2.00 lots (3.00-4.99)	1:300
Next 5.00 lots (5.00-9.99)	1:200
Next 15.00 lots (10.00-24.99)	1:50

3. Progressive calculation and position aggregation :

- a) Leverage is applied progressively by volume band. Crossing a threshold does not reprice the earlier bands at the new band's leverage. Only the incremental Gold volume receives the leverage applicable to its band.

b) For illustration, at a Gold price of USD 4,100 per troy ounce and a contract size of 100 ounces per lot, a cumulative 10-lot exposure requires approximate margin of USD 15,443.33: first 3 lots at 1:500 (USD 2,460), next 2 at 1:300 (USD 2,733.33), and next 5 at 1:200 (USD 10,250). One further lot at 1:100 adds approximately USD 4,100.

c) [CONFIRM] The MT5 dealing team must confirm how multiple orders, hedged positions, pending orders and positions across accounts are aggregated, as well as contract size, currency conversion, rounding and any special symbol margin rules. Published illustrations do not override live platform calculations.

Worked example: 10.50 lots of Gold

This example demonstrates exactly how the weekday progressive leverage bands are split when a client has a total of **10.50 lots** of Gold exposure. Earlier portions keep their original leverage even after the next band is reached.

Assumptions: Gold price USD 4,100 per ounce; 1 standard lot = 100 ounces. Figures are illustrative.

Volume portion	Leverage	Margin required
First 3.00 lots	1:500	\$2,460.00
Next 2.00 lots	1:300	\$2,733.33
Next 5.00 lots	1:200	\$10,250.00
Remaining 0.50 lot	1:100	\$2,050.00
Total 10.50 lots	Progressive	\$17,493.33

In simple terms: The first 3 lots stay at 1:500, the next 2 lots at 1:300, and the next 5 lots at 1:200. Only the additional **0.50 lot** falls into the 1:100 band. The earlier 10 lots are **not recalculated** at 1:100.

Incremental margin check: Margin for 10.00 lots = USD 15,443.33. Adding 0.50 lot at 1:100 requires approximately USD 2,050.00 more. Total = **USD 17,493.33**.

The normal weekday example does not apply during the designated weekend period, when the proposed 1:50 weekend leverage rule applies. See Section 4 for conditions requiring confirmation.

INTERNAL DRAFT - Illustrations do not override MT5 live margin calculations. Confirm volume aggregation, margin rounding, and weekend implementation before publication.

4. Weekend Gold leverage - 1:50

- a) During the designated weekend risk period, the maximum Gold leverage for this special arrangement will be 1:50, replacing the normal weekday progressive leverage bands for the period.
- b) This temporary reduction is intended to address elevated gap risk, reduced liquidity and unexpected market events during market closures. The same approach may be considered during exceptional risk events as described in Section 5.
- c) [CONFIRM] The exact weekly start and end times, including the time zone/server time and treatment of public holidays, must be published in the ONEXAR trading-hours notice or contract specifications before this policy takes effect.

- d) [CONFIRM] ONEXAR must confirm whether the 1:50 weekend requirement applies to all open Gold positions, new orders, pending orders and hedged positions; how and when margin is recalculated; and whether the platform will permit opening new positions during the restricted period.
- e) Clients should maintain sufficient free margin ahead of the weekend. If margin requirements increase, available free margin may fall and margin calls or stop-out may occur under the account's applicable margin call and stop-out rules.

5. Exceptional market conditions and changes :

- a) ONEXAR may impose additional margin or leverage restrictions where permitted by the client agreement and applicable law during extraordinary volatility, geopolitical conflict, major economic announcements, market disruption, liquidity shortages or other material risk events.
- b) Where reasonably practicable, ONEXAR will communicate changes in advance through the client portal, email, website or other designated channels. In fast-moving circumstances, immediate changes may be necessary, subject to applicable contractual and legal requirements.
- c) [CONFIRM] Any discretionary authority, notice periods, order-handling rules and emergency triggers must be aligned with ONEXAR's governing client agreement and legal review.

6. Margin, losses and client responsibilities :

- a) Leverage changes the amount of margin required; it does not change the profit or loss generated by the same position size and price movement. Higher leverage can increase the risk of taking excessive exposure.
- b) Clients must monitor equity, used margin, free margin, margin level and all open/pending orders, including automated strategies. Margin requirements can change as prices move, exposure increases, the weekend period begins or exceptional conditions arise.

- c) Stop-loss orders may not execute at the requested price during gaps or illiquid markets. Clients remain responsible for managing positions and maintaining adequate funds. ONEXAR does not guarantee against losses, margin calls or stop-out.

7. General provisions:

- a) This special arrangement is subject to ONEXAR's applicable Client Agreement, Risk Disclosure, Order Execution Policy, contract specifications and other governing documents. In the event of inconsistency, the order of precedence must be defined in the final approved legal documents.
- b) ONEXAR may amend or withdraw this special arrangement subject to applicable agreements, law and notification requirements. No return, profit or loss limitation is guaranteed.
- c) Contact ONEXAR Sales/Support for eligibility and account arrangements: support@onexar.com | WhatsApp +971 50 733 2940.

8. Risk warning

Gold CFDs are leveraged, high-risk products. Market gaps, volatility and increased margin requirements can result in rapid losses and forced position closure. Clients should understand all costs, contract specifications and risk limits before trading.

INTERNAL APPROVAL CHECKLIST: a) weekend start/end and time zone; b) applicability to existing positions and orders; c) volume aggregation and hedged exposure; d) stop-out/margin-call policy; e) exceptional event authority and notice; f) legal entity, jurisdiction and effective date.
